RISK AND REWARD PROFILE

The indicator above illustrates the position of this Fund on a standard risk/reward category scale. Please note that:

- the risk reward indicator is based on historical data and may not be a reliable indication of the future risk profile of the Fund;
- the risk category shown is not guaranteed and may shift over time; and
- even the lowest category does not mean your investment is 'risk free'.

Due to the Fund's lack of operating history, this rating is based on the historical volatility of returns from a similar strategy currently managed by the Investment Manager. As this risk rating is not derived fully from the actual Fund, it may not reflect the Fund's actual risk level in the future.

The following risks are not adequately captured by the indicator:

- Operational Risk.** The Fund is exposed to the potential for loss caused by a deficiency in information, communications, transaction, processing and settlement, and accounting systems. The main risk is that third parties may fail to ensure that statutory requirements are met.
- Market Risk.** Investments in securities involve issuer, industry, market and general economic related risks. Adverse developments or perceived adverse developments in one or more of these areas could cause a substantial decline in the value of securities held by the Fund.
- Foreign Investment Risk.** Investments in foreign companies may decline in value because of sovereign, political, economic or market instability; the absence of accurate information about the companies; risks of unfavourable government actions such as expropriation and nationalisation.
- Currency Risk.** The Fund will be exposed to different currencies and changes in foreign exchange rates could create losses.
- Liquidity Risk.** Certain securities may be difficult or impossible to sell at the time and the price that the seller would like. The seller

may have to lower the price to affect a secondary market sale, sell other securities instead or forego an investment opportunity, any of which could have a negative effect on fund management or performance.

- Investment Management Risk.** The discretionary management style applied to the Fund relies on anticipating various market developments and/or security selection. There is a risk that at any given time the Fund may not be invested in the highest performing markets or securities. The Fund's Net Asset Value may also decline.
- Small Company Risk.** Investing in securities of smaller companies may be riskier than investing in larger, more established companies. Smaller companies may have limited financial resources, a less established market for their shares and a lower issued share capital relative to larger companies. This can cause the share prices of smaller companies to fluctuate more than those of larger companies. The market for the shares of small companies may be less liquid.

Please see the section entitled Risk Factors of the Prospectus where full details of all of the risks of the Fund are disclosed
